

ADVANCED HYBRID SYSTEM TELEPHONES

A VARIETY OF OPTIONS ENABLES CUSTOMIZED SOLUTIONS

The KX-TA1232 system works with all of our KX-T7000 and KX-T7300 series telephones and the KX-T7750, KX-T7720, KX-T7730 and the KX-T7740. The KX-TA624-4 system works with all the phones listed above plus the KX-T7735. In addition both systems operate with our wireless telephones, most single line phones, answering machines, fax machines and modems so you can utilize the equipment you already own. All the models can be individually programmed so you can custom tailor the system for your residence.

By adding an optional Panasonic KX-TVS Series Voice Processing System, you can enjoy automated attendant service, individual voice-mail boxes and more—without expensive software or hardware upgrades. With all of these choices, it's easy to custom-design a system that's just right for you.

EXPAND YOUR SYSTEM AS YOUR NEEDS GROW

Both systems work with standard telephone lines, so you don't need to upgrade your phone service. Model KX-TA624-4 has a base configuration of three central office lines and eight stations. It can easily expand to up to six central office lines and 24 stations with the addition of two plug-in cards, models KX-TA62470 and KX-TA62477.

The KX-TA1232 is initially configured for eight central office lines and 16 stations. It can expand up to 12 central office lines and 32 stations with the addition of plug-in card models KX-TA123260 and KX-TA123270.

ROOM-TO-ROOM INTERCOM

Finishing up some paperwork in your home office and need to find out if your son is ready for his soccer practice? By using the room-to-room intercom feature, you can call him in his room and get the answer you need without leaving your desk.

FLEXIBLE LINE BUTTONS

You can use the central office (CO) line buttons on each proprietary telephone to access a CO line or you can program them for one-touch operation of system features like intercom calling, speed dialing or paging.

SINGLE-LINE DEVICE INTEGRATION

Panasonic Advanced Hybrid Telephone Systems allow you to connect many types of single-line telephone devices such as answering machines, cordless phones, fax machines and computer modems, without the need for additional cards or modules. You save money by using equipment that you already own and by avoiding upgrade costs.

CALL WAITING CALLER ID¹

The KX-T7135, KX-T7030, KX-T7335 and the KX-T7730 all have a 1 line LCD display that can alternately display Caller ID name and number. All the displays with the exception of the KX-T7030 are backlit, making it a simple task to locate the phone and view the display information in the dark or poorly lit room. Our top of the line KX-T7735 has a 16 character, 3 line backlit LCD that shows both caller ID name and number, at the same time.

OFF-PREMISES CALL FORWARDING
This feature comes in handy if you're going to be away from home for awhile and don't want to miss any calls. Simply program the system to forward your calls to an outside telephone number or to your cellular phone and you can answer your calls wherever you go.

DIRECT INWARD SYSTEM ACCESS (DISA) WITH OUTGOING MESSAGE & FAX DETECTION²

If several family members share one telephone line, an optional DISA OGM/FAX Detection Card is a wise choice because it enables outside callers to reach their intended party directly. The caller will hear a message instructing them to dial a single-digit code for the desired party. The caller is then routed to that person's extension automatically. With this option, each family member can field their own calls and have their own answering machines, even though they share the same line! DISA card also enables you to call into the system from outside your home and utilize one of the system's lines to make calls. This feature can be helpful when you need to make calls from a client's office or are using a cellular phone.

Additionally, if a fax call is received (and a CNG tone is detected) during the outgoing message, the call will be automatically routed to the designated fax extension, eliminating the need for a dedicated fax line. (available on KX-TA624 only)

DOOR PHONE & DOOR/GATE OPENER³

Add security to your home with an optional Door Phone and Door/Gate Opener Adapter Card. With these options installed, our Advanced Hybrid Telephone Systems can interface with up to four door intercoms and can control up to four electronic door contact closures. If you have more than one door intercom, you can assign each one a unique ringing pattern⁴ to help you distinguish which one was pressed. You can also use these adapter cards to remotely control outside lights.

OTHER GREAT FEATURES

Toll Restriction This feature lets you prohibit certain outgoing calls by restricting selected system extensions from accessing specified area codes or exchanges. **Flexible Ringing Assignment** Allows you to program which phones will ring on each line. **Night Mode** Great for children's rooms or a home office, this feature automatically prevents selected extensions from ringing at night. **Room Monitor** Allows you to silently monitor a room from any system phone in the house. The room being monitored must contain a proprietary system phone with a built-in speakerphone

Paging Allows you to make a voice announcement simultaneously to all proprietary phones in the system. Rounding up the troops for dinner has never been easier! **Conferencing** Allows you to combine two calls from two different lines together, so you can talk to both parties at the same time.

Background Music Connects an appropriate audio source to the system and you can play music through any proprietary phone with a built-in speakerphone. When the phone rings or the handset is lifted, the music will temporarily stop. **System Speed Dial** Lets you program frequently called numbers into the system for quick and easy dialing from any system phone.

¹ Requires subscription to name-and-number Caller ID service offered by certain telephone companies for a fee. Also requires an optional KX-TA62493 or KX-TA123293 Caller ID card.
² Requires an optional KX-TA62491 or KX-TA123291 DISA card. Fax detection is not available on model KX-TA1232.
³ Requires an optional KX-T30655 Door Phone and an optional KX-TA62460 or KX-TA123260 Door Opener Adapter Card.
⁴ Distinctive ringing patterns are only compatible with Panasonic proprietary phones.

WIRELESS TELEPHONE & VOICE MAIL INTEGRATION

● ADD WIRELESS SYSTEM PHONE FOR PRODUCTIVITY AND MOBILITY

The KX-T7885 wireless phone uses 900 MHz operation and Panasonic Sound Charger™ technology for great range and crisp, clear sound. Model KX-TD7895 adds Digital Spread Spectrum technology for an even longer range and protection from eavesdropping. Both models feature flexible keys that can be programmed to access central office lines or system functions like speed dialing. They also have fixed keys for intercom, hold, redial, conference and transfer functions.

● CHOOSE FROM A WIDE RANGE OF PROPRIETARY SYSTEM PHONES

The Panasonic KX-T7000 and KX-T7300 Series of proprietary phones offers a wealth of features from which to choose, so you can build a system that fits your needs to a "T". Flexible CO line buttons, programmable soft keys, monitor speakers, automatic redial and headset compatibility are among the many features available. Most of the phones even come in two colors: ash white or matte black.
